Re: Application for Full Stack & Systems Engineer

Dear Hiring Team,

I am writing to express my strong interest in joining your engineering organization as a Full Stack & Systems Engineer. With extensive hands-on experience engineering production systems across Next.js and Go microservices—most prominently architecting a zero-trust enterprise AI orchestrator coordinating 600+ microservice endpoints—I specialize in building performant, fault-tolerant architectures that bridge complex distributed backends with intuitive, high-density user interfaces.

At Fountane, I led the core technical architecture of our enterprise AI orchestrator in Go. Rather than relying on fragile prompt engineering, I engineered a high-concurrency tool routing runtime that parses natural-language queries into parallelized API operations across 600+ microservice endpoints with sub-100ms dispatch latency. Security is enforced as a strict architectural invariant: by forwarding caller-scoped session tokens (JWTs) and programmatically injecting tenant IDs in Go, we eliminated prompt-based tenant drift with 99.9% tenant isolation compliance. Additionally, I designed an autonomous routine runtime for scheduled and event-driven business workflows with human-in-the-loop approvals, reducing operational manual inquiry handling by over 60%.

Complementing my systems work, I engineer responsive web applications using Next.js 15, TypeScript, and React, optimizing rendering lifecycles to reduce page load times by 40% on datasets exceeding 10,000+ records. On the backend tier, I design Go microservices backed by PostgreSQL and MySQL, guaranteeing strict transactional consistency (ACID), automated webhook verification for payment gateways, and dynamic role-based authorization (RBAC). I maintain 85%+ Vitest test coverage on critical business workflows and manage automated GitLab CI/CD release pipelines to ensure reliable, zero-downtime deployments.

I approach engineering with high ownership, deep analytical rigor, and a commitment to measurable outcomes—the same discipline that fuels my solo motorcycle endurance expeditions across thousands of kilometers through Ladakh and Rameshwaram. I would welcome the opportunity to discuss how my systems mindset, Go microservice expertise, and full-stack execution can make an immediate and lasting contribution to your team.

Sincerely,

Sunny Sahsi
Full Stack & Systems Engineer
